CPSC 304 Project Cover Page

Milestone #: 1

Date: Oct 1, 2024

Group Number: 43

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Ananya Mahapatra	98014368	w2z8i	am404@student.ubc.ca
Allison Ko	21792312	p3z3e	allison.ko.family@gmail.com
Karen Li	34384157	c6n7z	karen0li.student@ubc.ca

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)
In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

Project Description

The domain of our application falls within social media and communication applications. This project models interactions between various users in community spaces called servers. The servers host channels, typically organized by topic, where users can send messages. For example, a user interested in buying a pet goldfish can join a “goldfish” server, and send messages in various channels dedicated to related topics such as “breeding”, “feeding”, or “subspecies identification”. The user may also have recently watched Oppenheimer and can decide to join a “cinema” server as well. Other functions of social media and communication modeled by our project include premium plans for users and the ability to create and remove calendars and events, which can be shared with other users.

Database Specifications

The database will allow users to create an account (or delete an existing one), select an avatar, join (and leave) a server, and purchase a premium plan. Some functions are restricted to the type of user. For example, administrators can create and delete servers and their channels, and change settings in the server, while general members can only join servers. All users can send and view messages in channels. Users can create (and delete) calendars, which can be kept personal or shared on a server, and can also add (and delete) events to these calendars.

Application Platform

Our project will use the department provided Oracle database, and Javascript technology stack. For the GUI, we plan to use HTML and CSS.
